

GMA-D – 6 stations model

For the production of pressotherapy items

Composition

- High frequency welding press pneumatically operated for the inner welding
- High frequency generator built inside the press frame
- High frequency welding press pneumatically operated for the external welding
- High frequency generator built inside the press frame
- Turntable with 6 working stations with adjusting turning speed
- Liquid circulation refrigerating unit
- Control panel with PLC and touch screen

Technical Characteristics

Welding presses maximum closing force:	1200 kg
Electrodes-holder plate dimensions of the presses:	600x700 mm
Working plate dimensions of the presses:	600x700 mm
Working station dimensions of the turntable:	700x1000 mm
Output power of the generator for the inner welding:	12 kW
Output power of the generator for the external welding:	8 kW
Feeding voltage (on demand other voltages):	400 V (+/- 5%) – 3 PHASES + EARTH - 50 Hz
